

ACCESSIBILITY

DropSmart Accessibility Information

Prototype Placeholder Document

Prototype notice: This PDF is a placeholder for the DropSmart website prototype. It shows where accessibility information would appear in a completed service. It is not an accessibility audit, legal compliance statement, or official product guarantee.

What this document would include

A 1. Accessibility commitment - Design information in clear language with predictable page structure. - Support users who rely on keyboard navigation, readable text, and assistive technology. - Review contrast, spacing, headings, links, and form labels during development.	W 2. Website features to support access - Meaningful headings, page titles, and navigation labels. - Alternative text for important images and decorative images hidden from assistive technology. - Visible focus states, descriptive links, and responsive layout for different screen sizes.
F 3. Form and booking support - Form fields should include labels, helpful instructions, and clear error messages. - Users should be able to review information before submitting a request. - Important consent, permission, and confirmation steps should be easy to understand.	R 4. Content and readability - Use short sections, plain language, and consistent terminology. - Avoid relying on colour alone to explain important information. - Provide downloadable documents for detailed legal, privacy, and accessibility information.

Prototype accessibility checks

Keyboard access Navigation, cards, tabs, buttons, and forms should be reachable without a mouse.	Text contrast Text and interactive controls should remain readable against the background colours used.
Responsive layout Content should stay usable on desktop, tablet, and mobile screen widths.	Reduced motion Animations should be minimal and should respect reduced-motion preferences where possible.

Important limitation

DropSmart is a static prototype. This placeholder does not confirm formal accessibility compliance. A completed service would require proper testing with users, assistive technologies, browsers, devices, and official accessibility requirements.

ACCESSIBILITY SUPPORT

How users could get support

Placeholder guidance for a completed DropSmart service

S Report an access issue - Users could contact support if text is hard to read, controls are difficult to use, or pages do not work with assistive technology. - Reports should include the page name, device, browser, and a short description of the issue.	D Request another format - Users could request important information in a different format, such as plain text, larger print, or a simplified document. - The final service provider would confirm what alternative formats are available.
H Access help for renters and owners - Renters, landlords, homeowners, and property managers may need different support depending on account access and permissions. - Support information should explain who to contact and what information to prepare.	I Ongoing improvement - Accessibility should be reviewed when pages, forms, documents, or account features are updated. - Feedback from users should help improve the website and support information over time.

Example accessibility statement text

DropSmart aims to provide information that is easy to read, navigate, and understand. The website prototype uses structured headings, clear labels, descriptive links, and responsive layouts to support a range of users. If a user has difficulty accessing information, they should be able to contact support or request the information in another format.

Suggested contact placeholder

Support email	support@example.dropsmart
Response aim	A completed service would define a realistic response timeframe.
Information to include	Page name, issue description, device, browser, and any assistive technology used.

Final prototype note	This document is a placeholder for assignment and prototype purposes. It should be replaced with a reviewed accessibility statement before any real DropSmart service is launched.
