

DATA & PRIVACY

DropSmart Data & Privacy Information

Prototype Placeholder Document

Prototype notice: This PDF is a placeholder for the DropSmart website prototype. It shows where data and privacy information would appear in a completed service. It is not a real privacy policy, legal agreement, or live water provider document.

What this document would include

D 1. Information DropSmart may collect • Water-use readings, usage patterns, and alert events. • Account, property, meter, or support request details. • Contact details for bookings, support, or access invitations.	U 2. How information may be used • To show usage patterns, alerts, and possible waste. • To support setup, access management, and enquiries. • To help households make informed water-use decisions.
A 3. Who may manage access • Homeowners, landlords, property managers, or strata representatives. • Water providers or approved service partners where required. • Renters may be invited to view relevant property information.	C 4. User control and limitations • Access may be updated or removed when tenancy details change. • Data, access, and privacy settings may depend on the provider. • Official rules would be confirmed by the real service provider.

Example privacy expectations

Transparency Users should be told what information is collected, why it is needed, and who manages it.	Access control Owners or managers should invite users only to the correct property or tenancy account.
Purpose limits Water-use information should support usage insights, alerts, setup, and support - not unrelated purposes.	Provider confirmation A completed service would need official privacy terms from the water provider or service provider.

Important limitation

DropSmart is a static prototype. This placeholder does not confirm real data handling, privacy compliance, installation rules, or account services. For a real service, users should review the official privacy policy, terms of use, and provider guidance before sharing information or requesting installation.
